

B 2.2.2. Naming convention for DEM ORT files

- (a) The DEM file naming convention shall carry general metadata elements, which are delimited by a “_” in the file name, an example is as follows:

LO25_050M_2925BA01.ORT

- LO25 – the central meridian coordinate system (Gauss Conform projection)
 - 050M – the absolute accuracy of the DEM is 2.5m – 5m
 - 2925BA01 – the sheet reference index, in this case the 1:10 000 reference index.
 - ORT – ascii file name extension, orthogonal profiles.
- (b) Typical metadata accuracy element shall include the following.

| Accuracy Description | Accuracy Code |
|----------------------|---------------|
| 0M TO 2.5M | 025M |
| 2.5M TO 5M | 050M |
| 5M TO 10M | 100M |
| 10M TO 20M | 200M |
| 20M TO 30M | 300M |
| 30M TO 40M | 400M |
| 40+M | 500M |
